COMMENT	<pre>2-1-2, lBuxkDa, lDatan 303-8000, Datan (E-mail:tBasakl@nias_affrc.go.jp, URb.http://rgp.dna.affrc.go.jp/, Tel:81-298-38-7441, Fax:81-298-38-7468) On Sep 20, 2001 this sequence version replaced gi:13027309.</pre>
	Genes were predicted from the integrated results of the following: GENSCANI.0, BLASTN2.0, BLASTX2.0 as well as SplicePredictor (October 1998 version). The genomic sequence was searched against NORT Nonredundant Protein database. In
	(ftp://ncbi.nlm.nlh.gov/blast/db) and the cDNA sequence database at (ftp://ncbi.nlm.nlh.gov/blast/db) and the cDNA sequence database at RGP. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP2.0. ESTs represent the identified cDNA sequences using BLASTN 2.0 with the corresponding DDBJ accession no. and RGP clone ID.
	A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with EST homology (covering

A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from T7 to SP6 of the PAC clone. This sequence of P0529805 clone has an overlap with P0239H11 (DDBJ: AP004072) clone at the position 1 to 19,018 of 5' end. The sequence of this clone starts at the position 146,952 of P0529H11. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              complement (join(3596. 3889,3976. 4274,4750. 4839,

is cDNA from the soybean clone sgs4c.pk003.k23:fis which is homologous to COII. The COII and LISI proteins are involved in disease resistance. The COII and LLSI proteins are involved in disease resistance. The COII and LLSI DNAs of the invention may be used to alter the expression of COII and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides Sequence 2288 BP; 560 A; 510 C; 546 G; 672 T; 0 U; 0 Other;	Query Match 100.0%; Score 2288; DB 3; Length 2288; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COI1 protein and the Zea mays LLS1 protein. The present sequence is cDNA from the rice clone rlOn.pk099.pl4.fis which is homologous to COI1. The COI1 and LLS1 proteins are involved in disease resistance. The COI1 and LLS1 DNAs of the invention may be used to alter the expression
                                                                                                                                                                                                                                              2100
